

IMPACT ENERGY SOLUTION (IES)
Company Profile
BOX 1984, Lilongwe, Malawi

1. Company Overview

Impact Energy Solution (IES) is a Malawian clean energy enterprise dedicated to expanding access to affordable, reliable, and sustainable energy solutions for underserved households and small businesses. The company focuses on innovative last-mile distribution models that bring renewable energy technologies closer to rural and peri-urban communities. IES is a registered business in Malawi under the Malawi Business Registration Service (MBRS) with Registration Number: MBRS1006670.

The company works to accelerate Malawi's transition toward clean energy by promoting products and services that reduce reliance on traditional biomass fuels such as charcoal and firewood while improving livelihoods and environmental sustainability.

Through partnerships with technology providers, development organizations, and community networks, IES deploys energy solutions that address household energy needs, productive use of energy, and climate resilience.

2. Vision

To become a leading provider of inclusive clean energy solutions that transform livelihoods and protect the environment in Malawi and across the region.

3. Mission

To deliver accessible, affordable, and sustainable energy technologies through innovative distribution systems, strong community partnerships, and digital tools that ensure efficient last-mile delivery and long-term customer satisfaction.

4. Core Objectives

- Expand access to clean and modern energy solutions for underserved households.
- Promote environmentally sustainable alternatives to charcoal and traditional fuels.
- Strengthen community-based energy distribution systems.
- Support productive use of renewable energy to improve livelihoods.
- Contribute to Malawi's national and global climate goals through clean energy adoption.

5. Key Areas of Operation

5.1 Clean Energy Distribution

IES distributes renewable energy technologies that improve energy access while reducing environmental impact. The company focuses on products such as:

- Solar lighting solutions
- Clean cooking technologies
- Solar powered productive-use equipment
- Energy-efficient appliances

5.2 Last-Mile Distribution Networks

IES uses community-based distribution systems designed to reach rural and underserved areas. This includes:

- Recruitment and training of local sales agents
- Door-to-door product demonstrations
- Community marketing campaigns
- Local distribution hubs for product availability

This decentralized model ensures energy technologies reach households that are often excluded from traditional retail systems.

5.3 Digital Sales and Customer Management

IES integrates digital tools into its operations to improve efficiency and transparency.

These systems support:

- Digital sales tracking
- Customer data management
- Mobile payment systems
- Stock and logistics monitoring

Digital platforms allow IES to monitor distribution performance and improve customer service.

5.4 Productive Use of Energy (PUE)

IES promotes renewable energy technologies for income-generating activities such as:

- Solar irrigation systems
- Solar powered food processing equipment
- Energy solutions for small enterprises

These solutions help communities increase productivity and incomes.

6. Business Model

IES operates a hybrid social enterprise model combining commercial distribution with development impact.

Key elements include:

Community Agent Network: Local agents are recruited and trained to promote and sell energy technologies within their communities.

Regional Distribution Hubs: Products are stored and distributed through decentralized hubs that ensure reliable supply and efficient logistics.

Flexible Payment Models: Where possible, the company promotes flexible payment systems to make energy technologies affordable for low-income households.

Strategic Partnerships: IES collaborates with technology suppliers, NGOs, development partners, and financial institutions.

7. Operational Capacity

Field Operations

IES works with trained field agents who conduct:

- Household outreach
- Product demonstrations
- Sales and customer registration
- After-sales support

Storage and Logistics

The company maintains access to storage facilities suitable for renewable energy equipment and fuel products.

Customer Support

IES provides after-sales services including:

- Product user guidance
- Technical support
- Customer relationship management

8. Management Team

Richard Lichapa – Managing Director

Richard Lichapa is a renewable energy and development professional with more than ten years of experience in energy access initiatives, project coordination, and stakeholder engagement.

He holds:

- MSc in Management Studies – Malawi School of Government
- BSc in Renewable Energy Technologies – Mzuzu University

Richard has worked extensively with development partners, government institutions, and private sector actors implementing renewable energy initiatives including off-grid solar and productive use technologies.

His expertise includes:

- Renewable energy project implementation
- Energy market development
- Private sector engagement
- Community-based energy distribution
- Monitoring and evaluation

Steve Khomba – Sales and Market Development Lead

Steve Khomba is a Renewable Energy Specialist with over seven years of experience in solar home systems distribution, PAYGO energy models, and last-mile energy market development.

Education:

- BSc Renewable Energy Technologies – Mzuzu University
- Certificate in Project Management and Monitoring & Evaluation – SAGO Consultancy

Key experience includes:

- Alternative Cooking Energy Promoter – Modern Cooking for a Healthy Forest (MCHF)
- Regional Sales Coordinator – Zuwa Energy
- Sales Lead – SolarWorks
- Sales & Technical Supervisor – Solar Africa Limited

Achievements:

- Led teams distributing solar home systems to thousands of rural households.
- Trained field sales agents in PAYG technology and community energy marketing.
- Built strong community networks supporting rapid adoption of renewable energy products.

Louis Thauzeni – Technical Director

Louis Thauzeni is a Renewable Energy Engineer specializing in solar photovoltaic system design, installation, inspection, and maintenance.

Education:

- Bachelor of Science in Renewable Energy Technologies – Mzuzu University

Professional certifications:

- Installation and Maintenance Permit – Malawi Energy Regulatory Authority
- Graduate Engineer – Malawi Engineering Institution
- Professional Member – Renewable Energy Industries Association of Malawi

Professional experience includes:

- Electrical Engineer – UNICEF Malawi
- Field Engineer – FC Consulting Engineers
- Solar PV Engineer – SITE Engineering
- Technical Supervisor – Solar Africa Limited

Technical expertise:

- Solar PV system design and installation
- Renewable energy system inspections and commissioning
- Feasibility studies for renewable energy projects
- Technical supervision and quality assurance
- Renewable energy infrastructure development

9. IES Distribution Model for Clean Cooking Solutions

Impact Energy Solution will implement a decentralized last-mile distribution system designed to ensure reliable product availability and customer support.

The model includes:

Regional Distribution Hub

IES will maintain a storage facility where clean cooking stoves and pellet fuel can be stored and distributed to communities.

Community Sales Agents

IES will recruit and train local agents who will:

- Conduct household demonstrations
- Register customers
- Facilitate stove adoption
- Provide user guidance

Door-to-Door Sales

Agents will promote products through direct engagement with households, markets, churches, and community gatherings.

Customer Retention

Agents will ensure consistent pellet fuel supply and provide follow-up visits to maintain customer satisfaction.

10. Agent Network Structure

The IES distribution system will operate through a structured agent network designed for efficiency and scalability.

Level 1 – Regional Distributor (IES)

Responsible for:

- Product storage
- Bulk logistics
- Agent recruitment and supervision
- Reporting and digital platform management

Level 2 – Community Sales Agents

Responsible for:

- Customer recruitment
- Product demonstrations
- Sales and registration
- Customer education

Level 3 – End Users

Households and small businesses using clean energy products.

This structure ensures strong community presence while maintaining efficient product distribution.

11. Partnerships and Collaboration

IES collaborates with:

- Clean energy technology providers
- Development organizations and NGOs
- Government agencies
- Financial institutions
- Private sector distributors

These partnerships enable the company to scale renewable energy access and strengthen sustainable energy markets.

12. Social and Environmental Impact

IES contributes to sustainable development by:

- Reducing dependence on charcoal and firewood
- Lowering greenhouse gas emissions
- Promoting clean cooking technologies
- Improving household health and safety
- Supporting rural economic development

13. Geographic Focus

IES operates in Malawi with a focus on rural and peri-urban communities where energy access remains limited.

The company aims to expand its distribution network across multiple districts through partnerships and community-based sales systems.
